

PROJECT REPORT

Name : Deepanshu Kamboj

Level : Diploma

Roll No : 23f2004097

College : IIT Madras

Project Statement

Household Services

My Approach

1. I first initialized my Flask app by creating project directory and configure SQLite for Database.
2. Then I defined models for '**Users**', '**Customers**', '**Professionals**', '**Service Requests**', '**Services**'.
3. I made single login page for admin, customer and professional.
4. Different signup forms for customer and professional.
5. I created dashboard for all users using Bootstrap.
6. After that I created forms for view, edit, profile of New Service and Profile of users
7. I add functionalities like update, view and delete campaign.
8. I add function '**Book**' in customer dashboard for booking a service which can be accepted or rejected by professional.
9. In admin's dashboard, deleting customer, professional, service function is added.

Frameworks and Libraries

1. Flask for backend use.
2. Vue.js for frontend .
2. Bootstrap for HTML generation and styling.
3. Reddis and Celery for mail scheduling and generating csv file.
